

Brass Overpressure Safety Valve with Gauge

This brass safety valve is designed for overpressure protection in various systems. It features a corrosion-resistant brass body, adjustable pressure relief setting, and a clear pressure gauge for monitoring system pressure.

Overview

Reliable Pressure Protection

This brass overpressure safety valve is engineered for critical pressure control in boiler heating systems, hot water cylinders, and general water plumbing. Featuring an integrated pressure gauge, it provides real-time monitoring and automatic discharge when calibrated pressure limits are exceeded. Its robust brass construction ensures long-term durability and corrosion resistance in demanding HVAC and industrial environments.

Technical Specifications

Suitable Applications

- Boiler Heating Systems
- Hot Water Cylinders
- Water Plumbing Systems
- HVAC&R Systems
- Industrial Pressure Control
