

# Brass Safety Relief Valves for Air Compressors

These brass safety relief valves are designed for air compressors. The valves are essential for maintaining safe operating pressures within air compressor systems.

## Product Overview

### Essential Pressure Control

These brass safety relief valves are critical components designed specifically for air compressor systems. Engineered to maintain safe operating pressures, they prevent over-pressurization and ensure system longevity. Each unit features a distinct yellow cap and a manual pull-ring, allowing for easy testing and emergency pressure release by operators.

## Technical Specifications

### Operational Function

Over-pressure protection • Manual testing capable

Material	Brass
Key Features	Manual Pull-Ring, Yellow Cap, Pressure Relief, Safety Mechanism
Primary Application	Air Compressor Systems
