

Brass Swing Check Valve

This swing check valve permits flow in a single direction, effectively preventing backflow. Made of robust brass, it incorporates threaded connections for simple integration into diverse plumbing setups.

Product Overview

Reliable Flow Control

This brass swing check valve is engineered to ensure unidirectional fluid flow, effectively preventing backflow in your piping systems. Constructed from durable brass, it offers a robust solution for fluid handling applications. Its threaded connection design facilitates straightforward installation, making it a versatile choice for various plumbing and industrial setups.

Technical Specifications

Primary Function

Unidirectional Flow • Backflow Prevention

Material	Brass
Connection Type	Threaded

Application

Typical Applications

- Plumbing systems
- Fluid handling systems
- General industrial piping
