

Brass Valve Core for HVAC&R Systems

High-quality brass valve core designed for HVAC&R systems. This valve core ensures precise flow control and reliable performance.

Overview

High-Performance Brass Valve Core

This high-quality brass valve core is engineered specifically for HVAC&R systems, ensuring precise flow control and long-term reliability. Constructed from durable brass, it offers excellent resistance to corrosion and is built to withstand demanding operational environments. Its robust design minimizes leakage, making it an ideal choice for both new installations and system replacements.

Technical Specifications

Key Features

- Precise flow control
- Corrosion-resistant construction
- Robust sealing design
- Minimal leakage

Material	Brass
Compatible Systems	Heating, Ventilation, Air Conditioning, Refrigeration
