

Brewery Expansion Project

This project facilitated the expansion of a brewery, increasing its production capacity to 100,000 tons per year. The expansion included a saccharification workshop.

Project Overview

Industrial Brewery Expansion

This large-scale industrial project focuses on significant capacity expansion for high-volume beverage manufacturing. Designed with engineering excellence, the facility integrates advanced saccharification technology to optimize production workflows. The project is recognized for its superior architectural and functional design standards in the global food and beverage industry.

Key Metrics

Annual Production Capacity

100000 tons/year

Annual Output

Awards and Recognition

Industry Recognition

National Excellent Design Exposition Award, National Science and Technology Progress Prize, National Excellent Design Gold Medal

Technical Implementation

Engineering Division

Fourth Design Engineering Department (Food Engineering)
