

Broadcasting Board for Radio and TV Applications

This broadcasting board is designed for radio and TV applications. Its compact design allows for integration into various broadcasting systems for signal processing, encoding, or decoding.

Product Overview

High-Performance Broadcasting Component

The EF104B-0400 is a professional-grade broadcasting board engineered specifically for radio and television infrastructure. This versatile unit excels in signal processing, encoding, and decoding tasks within complex media systems. Its compact and integrated design ensures seamless compatibility with existing broadcasting hardware, making it a reliable choice for technical upgrades.

Technical Specifications

Model ID	EF104B-0400
Series	EF104
Internal Reference	1008-07

Key Features

Application Areas	Radio Broadcasting, TV Broadcasting, Signal Processing, Encoding/Decoding
-------------------	---

Component Inventory

Integrated Components

- Integrated Circuits
- Resistors
- Capacitors
- Broadcasting Connectors
