

Bronze Gate Valve with Threaded Connections

This gate valve is constructed from bronze and features threaded connections for easy installation. A red handwheel provides manual operation and precise control over the opening and closing of the valve.

Product Overview

Reliable Flow Control

This bronze gate valve is engineered for durability and consistent performance in industrial fluid management systems. Featuring a manual red handwheel, it allows for precise control over the opening and closing of the valve. Its robust bronze construction ensures excellent corrosion resistance, making it a dependable choice for water, oil, and gas applications.

Technical Specifications

Key Features

- Corrosion resistant bronze body
- Easy installation with threaded connections
- Precise manual flow control
- Suitable for diverse industrial applications

Material	Bronze
Connection Type	Threaded
Compatible Media	Water, Oil, Gas
Operation	Manual Handwheel
