

Brushed Aluminum Component with Ventilation

This aluminum component features a brushed finish and precision-drilled mounting holes. It includes ventilation slots and is designed for structural or protective uses.

Product Overview

Precision Engineered Aluminum Component

This brushed aluminum component is designed for structural and protective applications in engineering assemblies. Featuring precision-drilled mounting holes and integrated ventilation slots, it combines durability with thermal management capabilities. Its lightweight construction and corrosion-resistant finish make it an ideal choice for professional engineering projects requiring tight tolerances.

Technical Specifications

Surface Finish

Brushed

Material

Brushed Aluminum

Key Features

Ventilation Slots, Corrosion Resistant, Lightweight, Precision Drilled
