

Brushed DC Electric Motor

This is a brushed DC electric motor with a cylindrical housing. It features exposed internal components including copper windings and electrical connections, designed for integration into a larger system.

Overview

Brushed DC Electric Motor

This brushed DC electric motor is engineered for reliable rotational force in a wide range of industrial and commercial applications. Featuring a robust cylindrical housing and visible high-quality copper windings, it is designed for seamless integration into larger mechanical systems. The unit includes multiple wire leads at the base, ensuring straightforward electrical connectivity for system builders and engineers.

Technical Specifications

Motor Type	Brushed DC
Construction Features	Cylindrical Housing, Copper Windings, Integrated Wiring
