

Brushless AC Generator

This brushless AC generator is engineered for dependable electrical power in diverse industrial and commercial settings. The generator's design eliminates brush maintenance, ensuring durable performance and reducing downtime.

Product Overview

TFW Series Synchronous Generator

The TFW series is a three-phase brushless synchronous generator engineered to meet contemporary international and national standards. By utilizing advanced technological design, this generator provides robust and stable electrical power output for diverse industrial and commercial applications. Its brushless construction eliminates the maintenance requirements typically associated with brushes and slip rings, ensuring higher reliability and minimal operational downtime.

Technical Specifications

Maintenance Profile

Low maintenance • Brushless design

Generator Design	Three-phase brushless synchronous
Standards Compliance	GB/T15548-95, International Standards
