

Brushless DC Motor for Vacuum Cleaners

This brushless DC motor is designed for vacuum cleaner applications. It features a compact design, high airflow, and efficient power consumption to ensure optimal suction power.

Overview

High-Performance Brushless DC Motor

This high-performance brushless DC motor is specifically engineered for vacuum cleaner applications, prioritizing efficient and reliable operation. Featuring a compact design with an integrated control circuit board, it ensures stable power delivery and high torque output. The motor is optimized for high airflow and superior suction power, making it a robust solution for various modern vacuum cleaner models.

Technical Specifications

Rated Voltage	25 V
Capacitor Rating	1000 μ F
Motor Type	Brushless DC (BLDC)

Features

Application Suitability

Vacuum Cleaners

Key Features

High Airflow, Compact Design, Integrated Control Board, High Torque Output
