

BT40 Collet Chuck MAS403

This collet chuck is designed for use with BT40 spindle tapers. It is compatible with ER32 collets, offering a versatile solution for holding various cutting tools.

Overview

Precision BT40 Collet Chuck

This BT40 collet chuck is engineered to the MAS403 standard, ensuring high dimensional accuracy and reliable interchangeability for CNC milling and machining centers. Constructed from hardened, ground alloy steel, it offers superior durability and secure tool clamping for demanding operations. Designed for versatility, this chuck is compatible with ER32 collets, making it an ideal solution for a variety of tasks including drilling, milling, and tapping.

Technical Specifications

Taper Standard	MAS403
Shank Type	BT40
Taper Ratio	7:24
Compatible Collet Type	ER32
Precision	0.005 mm

Manufacturing & Standards

Place of Origin	China
Production Services	CNC Machining, OEM Available, Customization via Drawings
