

Building Hardware Shock Absorbers

These shock absorbers are designed to dampen movement and reduce impact in building hardware. They are suitable for use in doors, windows, and other applications requiring controlled motion.

Product Overview

Industrial Shock Absorption Solutions

These building hardware shock absorbers are designed for heavy-duty industrial and mechanical applications. Featuring robust metallic construction and protective rubber boots, they are engineered to dampen vibrations and manage impact forces effectively. The versatile mounting configurations make them suitable for various structural and mechanical integration needs.

Technical Specifications

Mounting Configurations

- Cylindrical Mounting Eye
- Flange Mount

Construction Material	Hardened Metal Alloy
Protection Features	Rubber Boot, Dust Seal

Performance Metrics

Component Type

Hydraulic • Industrial Hardware
