

Building-Like Sand Maker for Concrete and Mortar Production

This building-like sand maker offers stable performance and high safety for various applications. It is widely used in commercial concrete production, dry-mixed mortar manufacturing, and construction waste recycling.

ADDITIONAL IMAGES

Overview

Industrial Sand and Aggregate Production

This advanced building-like sand-maker is engineered for high-capacity material processing in mining and construction sectors. Its modular, multi-level design optimizes footprint while streamlining the production of high-quality sand from stone debris, construction waste, and mine tailings. Equipped with intelligent control systems, the unit ensures stable output, operational safety, and high adaptability to varying moisture levels.

Performance Metrics

Key Performance Metrics

500 t/h

Max Input Capacity

200 t/h

Max Feeding Volume

Operational Specifications

Maintenance and Design

- Building-like multi-level structure
- Simplified maintenance procedures
- Wear-resistant internal components
- Modular design for scalability

Raw Material Adaptability

Water and mud content $\leq 10\%$ (supports special removal system)

Integrated Technologies

Intellectual Control System, Dust Suppression, Multi-stage Crushing, High-performance Rotor
