

Bulb Turbine Generator Component

This is a bulb turbine generator component. It is designed for use in hydropower systems.

Product Overview

High-Efficiency Bulb Turbine Generator Component

This bulb turbine generator component is engineered for robust performance in hydroelectric power generation applications. Designed with heavy-duty construction, it facilitates reliable energy conversion and is suitable for demanding industrial environments. The unit is optimized for integration into large-scale turbine systems, ensuring consistent power output and operational durability.

Technical Specifications

Unit Capacity

80 MVA

Max Unit Capacity

Rated Voltage

20 kV
