

Busbar Processing Machine

The busbar processing machine is a multi-station tool designed for efficient busbar fabrication. It is suitable for producing large electric control boxes and for use in transmission and distribution construction projects.

Overview

Versatile Busbar Processing

This multi-function busbar processing machine is engineered for high-efficiency cutting, punching, and bending of copper and aluminum busbars. Designed for versatility and safety, it is an ideal solution for the production of large electric control boxes and on-site transmission and distribution construction projects. The system combines high intelligent activity with a compact footprint, ensuring powerful performance, low noise operation, and a clean working environment.

Key Features

Core Functions

- Cutting
- Punching
- Bending

Certifications

CCC, GS, CE

Technical Specifications

Safety Features

Emergency Stop • Pressure Gauge

System Type

Hydraulic

Mobility

Yes
