

Busbar Processing Machine

This machine is designed for cutting, punching, bending, and embossing copper and aluminum busbars. It features a hydraulic system for powerful and precise operation.

Overview

Four-in-One Busbar Processing Solution

This high-efficiency busbar processing machine integrates four critical operations into a single, compact system. Designed for precision fabrication of copper and aluminum busbars, it streamlines workflows by allowing cutting, punching, bending, and embossing to be performed simultaneously. With robust hydraulic power and adjustable settings, this machine is an essential tool for electrical switchgear and transformer manufacturing, ensuring high productivity and consistent accuracy across various busbar sizes.

Capabilities

Compatible Materials

- Copper Busbars
- Aluminum Busbars

Supported Operations

Cutting, Punching, Bending, Embossing

Technical Specifications

Key Features

Multi-workstation design • Simultaneous operation • Adjustable settings • Robust construction

System Type

Hydraulic

Applications

Primary Industries

- Electrical switchgear manufacturing
- Transformer production
- Electrical equipment fabrication
