

Business Management System Architecture

This system illustrates the functional architecture of a business management system. It details the various modules and their interconnections for business management functions.

System Overview

Comprehensive Business Management Architecture

This Business Management System Architecture provides a robust framework designed to streamline operational workflows and enhance service delivery. The system is bifurcated into two primary functional domains: Agency Fee Business and Intelligent Public Call Business, ensuring specialized handling for diverse operational requirements. By integrating modular components such as terminal, account, and rate management, this architecture offers a scalable solution for complex business environments.

Agency Fee Business

Key Modules

- Agent Management
- Account Management
- Query Statistics
- Terminal Management
- Business Hall Management
- User Management
- System Configuration Management

Intelligent Public Call Business

Key Modules
