

# Butterfly Cone Fan for Ventilation

This butterfly cone fan maximizes air volume within poultry and livestock houses. Its design features a galvanized steel frame and precision-engineered fan blades.

## ADDITIONAL IMAGES

## Product Overview

### High-Efficiency Ventilation Solution

The Butterfly Cone Fan is engineered for optimal air circulation in demanding industrial and agricultural environments. Designed with a specialized cone structure, it significantly enhances airflow efficiency compared to traditional box fans. This robust unit is ideal for cooling, exhaust, and ventilation applications, offering reliable performance for poultry and livestock management systems.

## Performance Metrics

### Airflow Efficiency Gain

**15 %**

Increased Air Flow

## Key Features

### Primary Applications

Poultry Farming, Livestock Ventilation, Industrial Cooling, Agricultural Exhaust

## Construction & Design

### Design Features

- Galvanized steel frame construction
- Aerodynamic cone design for reduced turbulence
- Precision-balanced fan blades
- Robust motor for reliable operation
- Protective safety grill

### Speed Control

Yes
