

Butterfly Valve

This valve is used to regulate the flow of fluids in a pipeline. It features a disc that rotates to control the flow.

Overview

Advanced Flow Control Solution

This butterfly valve is engineered to address critical challenges in water treatment and sewage management systems. Designed to optimize operational efficiency, it helps facilities manage high Chemical Oxygen Demand (COD) levels effectively. By integrating new flow control technology, this valve provides a reliable solution for reducing treatment expenses and improving system performance.

Applications

Key Operational Benefits

- Reduction of sewage treatment expenses
- Management of high COD levels
- Advanced flow control technology

Primary Applications

Water Treatment, Sewage Management, Industrial Flow Control
