

Butylated Hydroxy Toluene (BHT) - Synthetic Antioxidant

Butylated Hydroxy Toluene (BHT) is a synthetic antioxidant. It is used to prevent or slow down the oxidation of materials.

Product Overview

Synthetic Antioxidant Overview

Butylated Hydroxy Toluene (BHT) is a high-performance synthetic antioxidant presented as a fine white crystalline powder. It is engineered to effectively prevent or slow down the oxidation process in various materials, thereby significantly extending shelf life and preventing degradation. This versatile compound is an essential additive across multiple sectors, including food, cosmetics, pharmaceuticals, and the rubber and plastics industries.

Physical Properties

Physical Form	White crystalline powder
---------------	--------------------------

Applications

Primary Industries	Food Industry, Cosmetics, Pharmaceuticals, Rubber Production, Plastics Manufacturing
--------------------	--------------------------------------------------------------------------------------

Functional Benefits

Core Function

Antioxidant • Preservative • Oxidation Inhibitor
