

C6X Series Jaw Crusher

The C6X series jaw crusher is designed to address the challenges of low production efficiency and difficult installation. It is ideal coarse crushing equipment, boasting international first-class level indexes in equipment structure, use functions and production efficiency.

Product Overview

C6X Series Jaw Crusher

The C6X Series Jaw Crusher is a next-generation, energy-efficient solution designed for high-capacity coarse crushing. Engineered to handle hard and corrosive materials, it features a robust, detachable frame and an integrated design that minimizes installation space. With advanced elastic damping anchors and an optimized crushing cavity, this machine ensures continuous, efficient operation even in the most stringent underground environments.

Key Advantages

Key Advantages

- Detachable frame for superior strength
- Optimized cavity design for higher crushing efficiency
- Integrated design for compact installation
- Elastic damping anchors to reduce operational impact

Operational Capabilities

Environment Suitability

Underground Mining • Coarse Crushing • Continuous Production

Material Suitability

Hard Rocks, Ores, Corrosive Materials
