

Cable Connector Parts and Control Unit

This collection includes a central control unit, wiring harnesses with connectors, and small components. These parts facilitate the connection and control of electrical systems in machinery or industrial applications.

Product Overview

Integrated Control and Connectivity Solution

This comprehensive set of cable connector parts and control units is designed for the precise management of electrical systems in industrial machinery. The kit features a central control module housed in a durable rectangular casing, complemented by a variety of high-quality wiring harnesses and specialized connectors. This modular approach ensures reliable signal transmission and simplified integration for complex electrical installations.

System Components

Wiring Assemblies

- Multi-wire bundled harnesses
- Pre-terminated specific connectors
- Industrial-grade insulation

Control Unit

Rectangular black control box with multiple integrated connection ports

Additional Components

Connectors, Adapters, Small hardware components

Technical Specifications

Target Applications

Industrial Machinery • Electrical Systems • Control Systems

Connectivity Features

- Multiple port interface on central unit
- Standardized connector ends for secure coupling
- Organized wire bundling for easy routing
