

Cable Patch Rack Manager with Legs

This cable patch rack manager is designed for efficient cable management in server racks. The legs offer stability and easy installation within standard rack configurations.

Product Overview

Efficient Cable Management Solution

The Cable Patch Rack Manager with Legs is engineered to optimize cable organization within server racks and data center environments. By providing a structured pathway for routing patch cables, this unit significantly reduces clutter and enhances overall airflow efficiency. Equipped with integrated legs, it ensures stability and simplifies the installation process in standard rack configurations.

Technical Specifications

Ideal Applications

- Data Centers
- Server Rooms
- Network Racks

Available Models

KF-TJ(A), KF-TJ(B)

Primary Function

Cable organization and routing

Features

Key Features

Integrated Legs • Improved Airflow • Structured Routing • Stability
