

Cable Production Haul-Off Unit

This caterpillar haul-off unit is designed for cable production, extrusion, and rewinding lines. The machinery provides consistent and reliable pulling force to ensure smooth and precise material handling during manufacturing processes.

Overview

High-Performance Caterpillar Haul-Off Unit

This caterpillar haul-off unit is engineered for cable production lines, extrusion lines, and rewinding lines, providing consistent and reliable pulling force for precise material handling. Designed for continuous operation in demanding industrial environments, it features robust construction and precision components to ensure long-lasting performance with minimal maintenance. The unit offers adjustable speed and tension control, allowing for optimal adaptation to various cable types and specific production requirements.

Operational Features

Control Capabilities

- Adjustable speed control
- Adjustable tension control

Primary Applications

Cable Production, Extrusion Lines, Rewinding Lines

Design and Build

Performance Metrics

1 Continuous

Operational Mode

Construction Quality

Robust Construction • Precision Components • Industrial Grade
