

Cable Sheathing Braiding Machine

Industrial braiding machine for cable sheathing and similar applications. It utilizes a rotating head with multiple spools to interlace braiding material around a core cable.

Product Overview

Industrial Cable Braiding Solution

This industrial braiding machine is engineered for high-performance cable sheathing, featuring a rotating head with multiple spools for precise material interlacing. Designed for continuous manufacturing environments, it utilizes heavy-duty steel construction to ensure durability and consistent output. The integrated control panel allows operators to easily adjust braiding parameters and monitor real-time performance, making it an ideal solution for producing shielded cables, hoses, and various braided products.

Technical Specifications

Construction Material	Heavy-duty steel
Operational Mode	Continuous operation

Capabilities

Typical Applications	Shielded Cables, Industrial Hoses, Braided Products
----------------------	---

Control & Monitoring

Control Features

- Adjustable braiding parameters
- Performance monitoring
- Integrated control panel
