

# Cantilever Sump Pump for Slurry and Sewage

This heavy-duty cantilever sump pump is engineered for reliable and durable performance in demanding applications. Its design is ideally suited for continuously handling abrasive and corrosive liquids and slurries while submerged in sumps or pits.

## ADDITIONAL IMAGES

## Overview

Detailed breakdown of the bearing assembly, column assembly, and wet end components showing the cantilevered design.

### Heavy Duty Cantilever Sump Pump

The TS/TSR series is a heavy-duty cantilever sump pump designed for applications requiring greater reliability and durability than conventional vertical process pumps. Its robust cantilever design eliminates the need for submerged bearings or mechanical seals, making it ideally suited for continuous handling of abrasive and corrosive slurries. Available in both hard metal and elastomer-lined constructions, these pumps are engineered for the most demanding industrial environments.

## Key Features

Robust casing and mounting plate construction for stable industrial operation.

### Design Advantages

- Fully cantilevered design eliminates submerged bearings and packing
- Double suction impeller design reduces thrust load and eliminates shaft seals
- Optional recessed impeller for large particle handling
- Available in hard metal (TS) or rubber-covered (TSR) construction
- Suction agitator options available for settled solids

## Technical Performance

### Performance Range

**1492 m3/h**  
Max Capacity

**55 m**  
Max Head

**250 kW**  
Max Power

### Model Comparison Table

Model	Capacity (m3/h)	Head (m)	Max Power (kW)	Speed (rpm)
40PV	7.2 - 39.6	3.9 - 27.4	15	1000 - 2200
65QV	19.08 - 102.6	5 - 31.1	30	700 - 1500
100QV	41.5 - 259.2	5.1 - 37.2	70	500 - 1200
150SV	115.2 - 576	6.7 - 35.7	110	500 - 1000
200SV	180 - 734.4	7.1 - 28.2	110	400 - 850
250TV	363 - 1188	7 - 36	200	400 - 750
300TV	385 - 1492	7.8 - 55	250	400 - 700

## Construction Materials

A fully assembled rubber-lined unit designed for corrosive and abrasive fluid handling.

### Material Options

Hard Metal, Elastomer Lined, Carbon Steel (Shaft/Column), Polyurethane (Impeller Option), Cast Iron

## Components

Comprehensive range of wear parts including impellers, liners, and bearing assemblies for easy maintenance.

### Available Components

- Impeller (Metal or PU)
- Volute Liner
- Pump Casing
- Bearing Assembly
- Shaft Sleeves
- Back & Front Liners
- Lower Strainer
- Expeller

## Applications

Heavy-duty vertical pumps ready for industrial installation in sumps and pits.

### Common Applications

Mining Slurry • Sewage Treatment • Industrial Effluent • Abrasive Liquids • Corrosive Fluids • Sump & Pit Drainage
