

Capillary Tube Set for Refrigeration Systems

This set features graduated capillary tubes for controlling refrigerant flow in refrigeration systems. The precision-engineered tubes have varying internal diameters to provide specific flow rates, optimizing performance and efficiency.

Product Overview

Precision Flow Control

This capillary tube set is meticulously engineered for refrigeration and ventilation systems to ensure precise control of refrigerant flow. By offering varying internal diameters, the set provides tailored flow rates necessary for maintaining optimal system efficiency and peak performance. Designed for durability in demanding environments, these tubes are constructed from high-quality copper or stainless steel, offering superior resistance to corrosion.

Technical Specifications

Primary Applications

- Refrigeration systems
- Ventilation systems
- Air conditioning units

Key Features

Precision-engineered • Corrosion-resistant • Graduated diameters

Material Options

Copper, Stainless Steel
