

Car Radio Antenna

This car radio antenna is designed to receive radio signals and transmit them to a car's audio system. It has a slender mast for optimal signal reception and a base with connectors for easy installation.

Product Overview

High-Performance Signal Reception

This car radio antenna is engineered to provide reliable signal reception for automotive audio systems. Featuring a long, slender mast design, it is optimized to capture radio frequencies effectively, ensuring clear sound quality. The unit includes a robust base with integrated connectors, facilitating straightforward installation on either the vehicle's roof or fender.

Technical Specifications

Design Features

- Long slender mast for signal optimization
- Integrated base connectors
- Easy installation interface

Compatible Mounting Locations

Roof, Fender

Primary Function

Signal reception and transmission to car audio system
