

Carbide Brazed Flat File for Metal Shaping

This carbide brazed flat file is designed for shaping, smoothing, and deburring various materials. Its durable carbide grit surface ensures efficient material removal and long-lasting performance on hardened steel, cast iron, ceramics, and other tough materials.

Product Overview

High-Performance Carbide Brazed Flat File

This carbide brazed flat file is engineered for efficient shaping, smoothing, and deburring of challenging materials. Its durable carbide grit surface ensures long-lasting performance even when working with hardened steel, cast iron, and ceramics. Designed with an ergonomic handle, the tool provides the comfort and precision required for both professional industrial applications and demanding DIY projects.

Technical Features

Primary Functions

- Shaping
- Smoothing
- Deburring

Compatible Materials

Hardened Steel, Cast Iron, Ceramics

Design & Ergonomics

Surface Coating

Carbide Grit

Handle Design

Ergonomic
