

Carbide Brazed Tips

Cemented carbide brazed tips are cutting tool inserts made from a hard composite material. They offer high hardness, wear resistance, and heat resistance for demanding applications.

Product Overview

High-Performance Carbide Brazed Tips

These cemented carbide brazed tips are precision-engineered cutting tool inserts designed for demanding industrial applications. By combining hard carbide particles with a robust metallic binder, they deliver exceptional hardness, heat resistance, and wear resistance. These tips are ideal for creating durable cutting edges on tool bodies, ensuring efficient and precise performance in both woodworking and metalworking environments.

Application & Usage

Suitable Industries

Wood Processing, Metal Processing, Metalworking, Woodworking

Technical Characteristics

Key Material Properties

- High hardness
- Superior wear resistance
- Excellent heat resistance
- Precision cutting performance

Construction

Cemented carbide composite with metallic binder
