

Carbide End Mill Cutter

This carbide end mill cutter is designed for precision cutting applications. It features a multi-flute design for efficient material removal and superior surface finish.

Product Overview

High-Performance Carbide End Mill

This high-performance carbide end mill is engineered for precision cutting applications, offering superior surface finish and efficient material removal. Constructed from premium-grade carbide, it ensures enhanced durability and extended tool life for demanding machining tasks. Designed with excellent rigidity and vibration dampening, it provides stable cutting performance in CNC milling machines and high-speed operations.

Technical Specifications

Design Features

- Multi-flute design
- High-rigidity construction
- Vibration dampening

Recommended Applications

CNC Milling • High-Speed Machining • Precision Cutting

Compatible Materials

Steel, Aluminum, Composites
