

Carbide Parting and Grooving Inserts

These carbide inserts are designed for parting and grooving applications. They offer excellent wear resistance and are suitable for machining steel, stainless steel, and cast iron.

Product Overview

Precision Carbide Inserts

These carbide parting and grooving inserts are engineered for high-performance machining applications, offering superior wear resistance and stable performance. Designed from 100% new material, they facilitate excellent chip control and deliver a high-quality surface finish. They are a reliable solution for efficient grooving and parting operations across a diverse range of industrial materials.

Technical Specifications

Material Grade

100% New Material

Operational Advantages

- Extended tool life
- High cutting speeds
- Superior surface finish
- Optimal chip control

Suitable Materials

Steel, Stainless Steel, Cast Iron

Options

Various grades and sizes available
