

Carbide-Tipped Circular Saw Blade for Aluminum

This circular saw blade is designed specifically for cutting aluminum. It features carbide-tipped teeth for extended life and clean cuts.

Product Overview

High-Performance Aluminum Cutting

This circular saw blade is engineered specifically for precision cutting of aluminum materials. Featuring durable carbide-tipped teeth, it ensures an extended service life and delivers clean, accurate cuts for professional applications. Designed to minimize vibration during operation, this blade provides efficient material removal for a variety of electric power tools.

Technical Specifications

Key Features

- Carbide-tipped teeth for extended durability
- Reduced vibration design
- High-efficiency material removal
- Clean and precise cutting performance

Compatible Materials

Aluminum

Usage

Application Suitability

Professional Use • DIY Projects

Tool Compatibility

Electric power tools
