Product Overview

Professional TCT Router Bits

These high-performance tungsten carbide-tipped (TCT) router bits are engineered for professional woodworking applications, offering exceptional precision and durability. Designed to deliver clean, accurate cuts, these tools are suitable for a wide range of materials including solid wood, MDF, veneered boards, and laminates. Featuring precision-ground cutting edges and robust steel shanks, they ensure consistent performance for decorative edging, trimming, and complex profiling tasks.

Technical Details

Shank Diameter	0.25 inch
Number of Flutes	2
Compatible Materials	Solid Wood, MDF, Veneered Board, Laminate, Hardwood, Softwood, Composites

Key Features

Design Features

- Tungsten Carbide Tipped (TCT) edges
- Integrated ball bearing guides for smooth operation
- Precision-ground cutting geometry
- Durable steel shank construction

Common Applications

Decorative Edging • Trimming • Profiling • Chamfering • Sign Making
