

Carbon Fiber Full Suspension Mountain Bike Frame

This high-performance mountain bike frame is constructed from carbon fiber. It features an advanced linkage system for enhanced suspension response and internal cable routing.

Overview

High-Performance Carbon Frame

This high-performance full suspension mountain bike frame is engineered with premium carbon fiber for an optimal balance of strength and lightweight agility. It features an advanced linkage system designed to provide superior suspension response across challenging terrains. With integrated internal cable routing, the frame offers a clean aesthetic while ensuring improved protection for your components.
