

# Carbon Motor Brushes with Leads

Carbon brushes designed for transferring electrical current to the rotating armature or rotor of a motor. They feature durable carbon construction, ensuring reliable contact and efficient performance, and are equipped with leads and connectors for easy installation.

## Product Overview

### High-Performance Carbon Motor Brushes

These carbon motor brushes are essential components engineered for reliable electrical current transfer to the rotating armature or rotor of industrial motors. Constructed from durable carbon materials, they ensure consistent contact and efficient motor performance over extended operational periods. Each unit comes equipped with pre-installed leads and connectors, facilitating secure connections and straightforward installation for maintenance or replacement tasks.

## Technical Specifications

### Usage

Replacement Part • Maintenance Component

### Industry Suitability

- Industrial Machinery
- General Electrical Maintenance

### Primary Application

Electrical Motors

### Material

Durable Carbon

### Installation Features

Pre-attached Leads, Integrated Connectors, Easy Installation
