

Carbon Steel Pipe Reducer Fitting

This carbon steel reducer is a pipe fitting designed to connect pipes of different sizes. It smoothly transitions from a larger diameter pipe to a smaller diameter pipe, maintaining a tight seal.

Product Overview

Carbon Steel Pipe Reducer Fitting

This carbon steel reducer is a critical pipe fitting designed to facilitate a smooth transition between pipes of different diameters. Engineered to maintain a tight, leak-proof seal, it ensures optimal flow and system integrity. These fittings are essential components in diverse industrial sectors, including HVAC, plumbing, and the oil and gas industry.

Technical Details

Material	Carbon Steel
Fitting Type	Reducer

Applications

Primary Function

Diameter Transition • Leak-proof Sealing

Common Industries	Plumbing, HVAC, Oil and Gas, Heating, Ventilation
