

Carboxymethyl Cellulose CMC

Carboxymethyl Cellulose (CMC) is a cellulose derivative used as a thickening agent, stabilizer, binder, and emulsifier. It is available in powder form, packaged in sealed bags to maintain its quality and prevent moisture absorption, conforming to industrial grade standards.

Product Overview

Carboxymethyl Cellulose (CMC)

Carboxymethyl Cellulose (CMC) is a versatile cellulose derivative widely utilized as a thickening agent, stabilizer, binder, and emulsifier. It is essential across various industrial sectors, including food processing, pharmaceuticals, cosmetics, and paper manufacturing. Supplied in a high-quality powder form, this product ensures consistent performance and reliability in demanding formulations.
