Product Overview

Robust Protection for Industrial Crane Switches

This cast iron protective cover is engineered to safeguard crane switches and electrical components in the most demanding industrial environments. Its heavy-duty construction provides exceptional resistance to wear and corrosion, ensuring long-term reliability and operational safety. Designed for versatility, it features multiple mounting points and a precision-machined opening to accommodate various crane models and switch types.

Material & Construction

Primary Material	Cast Iron
Surface Treatment	Protective coating for corrosion and wear resistance
Durability Features	Corrosion Resistant, Wear Resistant, Heavy-Duty, Industrial Grade

Design & Installation

Mounting Configuration	Multiple mounting points for versatile installation
Internal Design	Recessed interior for secure component placement
Switch Access	Precision-machined opening

Application

Compatible Equipment

- Industrial Cranes
- Overhead Crane Systems
- Electrical Switch Assemblies

Operating Environment

Harsh Environments • Demanding Industrial Sites
