

Cast Iron Grate for Metal Forming

This cast iron grate is designed for metal forming machines. It features a robust construction with evenly spaced slots for efficient material handling and support.

Product Overview

High-Performance Cast Iron Grate

This durable cast iron grate is engineered specifically for metal forming machinery. Designed to withstand high-temperature environments, it features a robust construction with precision-spaced slots that ensure efficient material handling and stable support. It provides a reliable platform essential for demanding casting and forging processes.

Technical Specifications

Design Features

- Robust construction
- Evenly spaced slots
- Heavy-duty load support

Material	Cast Iron
Suitable Applications	Metal Forming, Casting, Forging, High-Temperature Environments

Performance

Operational Environment

High-Temperature Resistant • Heavy-Duty
