

Cast Iron Housing Component with Mounting Holes

This precision-engineered cast iron housing component is designed for robust performance and durability. The component features a circular design with multiple mounting holes for secure attachment and a machined bore for system integration.

Product Overview

Precision Cast Iron Housing

This precision-engineered cast iron housing component is designed for robust performance and long-term durability in demanding industrial environments. It features a circular design with multiple integrated mounting holes, ensuring secure attachment and stability. The component includes a machined central bore and additional ports, facilitating seamless integration with related mechanical systems.

Material & Construction

Material	Cast Iron
Key Features	Wear Resistant, Corrosion Resistant, Precision Machined, High Durability

Design Specifications

Integration Features

- Machined central bore
- Integrated auxiliary ports

Mounting Configuration	Circular design with multiple mounting holes
------------------------	--

Application

Suitable Applications

Industrial Machinery • Mechanical Systems • Heavy-Duty Equipment
