

Cast Iron Impeller

This cast iron impeller is designed for demanding industrial applications. It is manufactured using precision casting techniques to ensure dimensional accuracy and structural integrity.

Product Overview

High-Performance Cast Iron Impeller

This high-quality cast iron impeller is engineered for demanding industrial applications, offering exceptional structural integrity and dimensional accuracy. Manufactured through precise sand casting techniques, it features a robust blade design optimized for efficient fluid transfer. It is a reliable component suitable for integration into pumps, compressors, and various types of rotating machinery.

Technical Specifications

Material	Cast Iron
Manufacturing Process	Sand Casting
Model Identifiers	XDS3300, 200-5510-102, 12202002

Applications

Suitable Applications

- Pumps
- Compressors
- Rotating Machinery
