

Cast Iron Machine Table

This machine table is made from high-strength GG20-GG30 cast iron. Its size ranges from 100mm*100mm to 3000mm*8000mm, with larger sizes available by drawing.

Overview

Precision Cast Iron Machine Table

This precision-engineered cast iron table is specifically designed for high-demand metal forming applications. Built with a robust, ribbed construction, it offers exceptional rigidity and stability to withstand rigorous industrial use. The surface is meticulously machined to achieve tight tolerances, ensuring superior flatness and parallelism for accurate operations. Additionally, the base is engineered for secure mounting and effective vibration dampening, making it an ideal work surface for precision metalworking.

Technical Specifications

Surface Quality

High Flatness • Parallelism Guaranteed

Suitable Applications

- Metal forming machines
- Precision metalworking
- Industrial assembly
- Vibration-sensitive operations

Material

Cast Iron

Design Features

Ribbed Surface, High Rigidity, Vibration Dampening, Precision Machined
