

Cast Iron Machinery Housing Component

This cast iron housing component is suitable for various mechanical applications. It features a circular base with a raised central hub, reinforced by radial ribs for added strength.

Product Overview

Cast Iron Machinery Housing Component

This robust cast iron housing component is engineered for demanding mechanical applications. Featuring a circular base design with a reinforced central hub and radial ribs, it provides structural integrity and durability. The component is precision-machined to ensure smooth surfaces and precise edges, making it an ideal choice for machinery assemblies requiring reliable, heavy-duty housing.

Technical Specifications

Key Features

- Circular base design
- Raised central hub
- Radial rib structural reinforcement
- Precision-machined surfaces

Material	Cast Iron
Application Category	Motorcycle Parts, Machinery Components, Mechanical Housing
