

Cast Iron Machinery Hub for Tractors

This cast iron hub is designed for agricultural machinery, specifically tractors. It features a robust construction with mounting holes for secure attachment and reliable performance.

Product Overview

Robust Agricultural Machinery Hub

This durable cast iron hub is specifically engineered for power machinery such as tractors, providing reliable performance in demanding agricultural environments. Its robust construction features a central bore and precision-machined mounting holes to ensure secure attachment and efficient power transmission. Designed for longevity, the hub incorporates strategically placed cutouts for optimized strength and weight reduction, making it an essential component for heavy-duty farming equipment.

Key Features

Key Performance Metrics

Cast Iron
Primary Material

Tractor
Equipment Type

Technical Specifications

Material Benefits	Wear Resistant, High Load-Bearing, Durable Construction, Precision Machined
Reference Code	A52272

Design & Construction

Design Characteristics

- Central bore for mounting
- Multiple threaded mounting holes
- Weight-reduction cutouts
- Optimized strength-to-weight ratio

Application & Finish

Target Applications

Agricultural Machinery • Power Machinery • Tractors

Available Finishes

- Dark surface finish
- Light surface finish
