

Cast Iron Oil Strainer

This product is suitable for working temperature not higher than 80 for FO. and LO. piping. The cast iron oil strainer features flanged connections, a removable cover, and a drain plug.

Overview

Cast Iron Oil Strainer

This cast iron oil strainer is designed for robust industrial applications, specifically engineered for fuel oil (FO) and lube oil (LO) piping systems. It features a durable construction with flanged connections for seamless integration and includes a removable cover for easy maintenance. The design ensures efficient debris removal with a dedicated drain plug and stable installation via integrated mounting feet.

Technical Specifications

Maximum Operating Temperature

80

Max Temperature

Compatible Fluids

Fuel Oil, Lube Oil

Design Features

Key Design Elements

- Flanged connections for piping integration
- Removable cover with swing bolts and eyebolts
- Integrated mounting feet
- Drain plug for debris removal
