

Cast Metal Motorcycle Sprockets

These cast metal sprockets are designed for motorcycle drive systems. The sprockets feature a toothed outer circumference for chain engagement and a central hub.

Product Overview

Cast Metal Motorcycle Sprockets

These cast metal motorcycle sprockets are engineered for robust power transmission in drive systems. Featuring a durable central hub and precision-toothed outer circumference, they are designed to ensure reliable chain engagement. These components are supplied in a raw, cast state, making them ideal for specialized assembly or aftermarket customization projects requiring high-strength metal parts.

Technical Specifications

Surface Finish

Raw Cast • Unfinished

Tooth Count

35

Material

Cast Metal

Primary Application

Motorcycle Drive Systems, Power Transmission, Aftermarket Parts
