

Cast Metal Support Component with Mounting Flange

This cast metal component provides structural support. It features a central hub with radial fins and a surrounding flange with mounting holes.

Product Overview

Cast Metal Support Component

This high-durability cast metal support component is engineered for demanding mechanical applications. It features a robust central hub and radial reinforcement fins to ensure structural integrity under load. The integrated mounting flange, equipped with multiple precision-spaced holes, allows for secure and stable installation in diverse industrial machinery environments.

Design and Construction

Key Structural Features

- Central hub with circular opening
- Radial reinforcement fins
- Flanged edge for mounting
- Evenly spaced mounting holes

Surface Finish

Unfinished cast texture

Application

Primary Applications

Mechanical Support, Structural Assembly, Industrial Machinery
