

CAT5E/CAT6 Network Patch Panel

This high-density patch panel is designed for CAT5E and CAT6 cabling systems. It features 24 ports for connecting network devices, making it ideal for structured cabling in data centers and telecommunication rooms.

Overview

High-Density Network Connectivity

This versatile patch panel supports both CAT5E and CAT6 cabling standards, providing a reliable foundation for structured cabling in data centers and telecommunication rooms. Designed for high-density environments, it offers organized connectivity for multiple network devices. The unit ensures consistent performance and simplified cable management for professional networking setups.

Technical Specifications

Available Port Configurations

- 24 Ports
- 48 Ports

Ideal Applications

Data Centers • Telecommunication Rooms • Structured Cabling

Cable Compatibility

CAT5E, CAT6

Shielding Type

UTP (Unshielded Twisted Pair)
